Helps ensure that all employees, managers and executives have the same understanding and agree with these key driving elements for the organization

Effective planning and action-oriented information

Making a decision and following through with appropriate action is easier when your employees have a goal or strategy in mind. Action-oriented information is essential when setting clear goals for individuals or businesses.

Focus on goals and actions

Help ensure that strategic processes become a natural part of every employee's daily work and get the most value from your resources. Create a shared understanding of the organization's focus and goals.

Flexible action management

Business Process Management in Microsoft Dynamics AX helps users establish and manage actions. When you set up actions, the program automatically helps ensure that your employees follow a standard structure, with follow-up as a natural part of action planning. Using the structured and intuitive tools of Business Process Management, your employees can focus on what's important, by defining personalized actions, setting their own priorities, and selecting and sorting various types of information such as action status, responsible persons and date intervals.

Accelerate business performance

Align managers and employees with your business strategy and improve accountability by directly linking the daily work employees to the company's strategic goals, and plainly show each employee how their efforts contribute to company results.

Increase transparency in your business processes

Increase your employees' motivation and productivity by letting people at all levels openly see the measures that matter to them. You can still help maintain the security of your business information because managers have the ability to control access to sensitive data.

FEATURES:

Strategic Planning	Identify, control and monitor the progress of your business's overall strategy or an employee's individual development plan. You can either set up the plan as a main plan or a sub-plan with accompanying references.
Best Practice Template	Establish procedures for regular tasks that are in accordance with your company's best practice policy. Templates give you an unlimited choice in the number of actions that you can simultaneously create and distribute to the responsible people.
SWOT Analysis	Register SWOT analysis results.
Action Planning	Decide which data in Microsoft Dynamics AX should be used to create the foundation for action-oriented efforts such as campaigns, customer satisfaction, employee performance reviews and recruitment tasks and control which tasks are delegated to individual employees.
Actions Management	Employees can define personalized actions, set their own priorities, and select and sort various types of information such as status, responsible persons and date intervals.
Response and Tracking	Manage respond to actions, create diverted actions, and require actions between employees. Setup the system so that a given response automatically suggests a new action.
Microsoft® Outlook® integration	Send actions as e-mail or create as tasks in Microsoft Outlook.
